## COMPONENTI SALVASPAZIO

### LIRA

Funzionale, dalle dimensioni ridotte, progettato per gestire al meglio ogni centimetro disponibile. Il **Sifone Spazio 2 NT** aderisce perfettamente alla parete di fondo, recuperando spazio nel sottoavello. Ispezionabile, presenta infatti un'apertura nella parte anteriore che consente, semplicemente svitando il tappo di chiusura, di rimuovere i residui accumulati nello scarico. Disponibile in versione per foro parete con diametro 40 mm oppure con adattatore per foro parete diametro 50 o 56 mm. Abbinato alla Piletta Basket Bassa in polipropilene e griglia in acciaio inox, dalla altezza ridotta (solo 87 mm), regala maggior spazio al sottoavello.

### LIRA Space-saving components

Functional, compact and designed in a way that ensures the very best use is made of every inch of available space. The **Sifone Spazio 2 NT** attaches perfectly to the wall at the back, making more space available under the sink. It can be inspected thanks to an opening at the front whose stopper can be unscrewed to remove any residue that may have accumulated in the S-trap. It comes in a version for a wall hole with a diameter of 40 mm or with an adapter for a wall hole with a diameter of 50 or 56 mm. Designed for use with the polypropylene Low Basket Drain unit and stainless steel grid, with a reduced height of just 87 mm, thus creating more space under the sink.

### SCHOCK Small draining rack

A sink with a very small draining board, but with a basin for a 60-cm unit, in other words a large sink that also saves on space, **Primus D100 XS** comes in six colours and is made of Cristalite, a patented material. The model, like all Schock sinks, is anti-bacterial, featuring the use of ProHygienic 21 (which is also patented), obtained by means of a mechanical procedure that involves no type of chemical additive. It measures 780x500 mm; the sink is 465 mm wide.
